

Get the maximum cooling capacity of your portable AC!

Avoid complicated wall openings and keep maximum cooling capacity indoors. With Wood's Door Sealing Kit, you avoid hot air coming back into the room, which significantly affects cooling capacity and energy balance. Our sealing kit also prevents dust, dirt, and insects from entering the room.

Wood's Door Sealing Kit

The door cover can be installed between a door and the frame with very little effort. The flexible and adjustable zipper opening makes it possible to place the seal for all types of doors and door-sized windows. After installation, doors can be closed without difficulty, when leaving the premises.

This technology makes our Door Sealing Kit versatile. A zipper on each of the openings allows a precise match to the hose's diameter and nozzle size to prevent warm, outdoor air from entering the room which reduces power consumption. In addition, you can reliably keep dirt and insects away!

Wood's Door Sealing Kit

Works on all portable AC models
Easy to assemble

EAN Code: 7332857502240
Measurement: 210x90cm
